

Digital x-rays provide a much better view of your teeth and potential dental conditions.

Digital imaging software allows us to see a number of different views of the tooth to gain a better understanding of the proper course of management.

Digital x-rays are a great benefit to our patients and we are excited to have this new diagnostic tool.

DIGITAL RADIOGRAPHY

State of the Art Technology

PATIENT BENEFITS

- ▶ Reduced exposure to radiation
- ▶ Less waiting time
- ▶ Shorter appointments
- ▶ Better understanding of treatment

PRACTICE BENEFITS

- ▶ Environmentally friendly
- ▶ No film or chemicals
- ▶ More time with patient
- ▶ Clinically meaningful images

LOW RADIATION DIGITAL X-RAY

Computerized Digital Radiography (CDR) x-rays are covered under your basic x-ray benefits, so there's no reduction in your insurance benefits.

To learn more about the benefits of CDR x-rays, read below:

SAFER...

Get necessary care without unnecessary radiation. X-rays play an invaluable role in the diagnosis of dental problems. But many people are concerned about the exposure to x-ray radiation. CDR reduces these worries because it requires approximately 40% less radiation than conventional film x-rays.

BETTER...

As accurate as conventional x-rays -- and reveals things film can't. The CDR image can be magnified 300x its normal size to enhance diagnosis, manipulated to correct contrast, and color adjusted to reveal hidden problems.

FASTER...

More time treating, less time processing. CDR images are instantaneous. No time is wasted processing and mounting x-ray film. The dental staff spends less time in the dark room and more time with you, discussing the health of your teeth.

SMARTER...

No harmful waste. Our CDR system uses no film or chemicals, reducing hazardous processing waste. It is better for the environment.
